OUR COMPANY

We have specialized in **growing and dehydrating vegetables** from organic farming and with Protected Geographical Indication (PGI) and process exclusively raw materials of **Italian origin**. Our company is certified by VALORITALIA for its organic product lines and is a member of the Consortiums for the Protection of PGI Red Radicchio. In addition to organic red radicchio, we also dehydrate the well-known Chioggia and Treviso red radicchio.

OUR COMMITMENT

Commitment to free from food and highest quality production standards are among our key strenghts. Our dehydrated products are all natural and plant-based, contain no additives, no preservatives, no colouring and no artificial flavours, have no sugar and no salt added and are naturally gluten and lactose free.

AIR-DRYING AT LOW TEMPERATURE

Drying or dehydration is the process of removing water from food without compromising its nutritional and organoleptic properties. If carried out at too high temperature, drying results in a significant loss of properties and nutrients. This is why all the raw materials we process are **dried at low temperature** (25 to 28°C or 77 to 82°F).

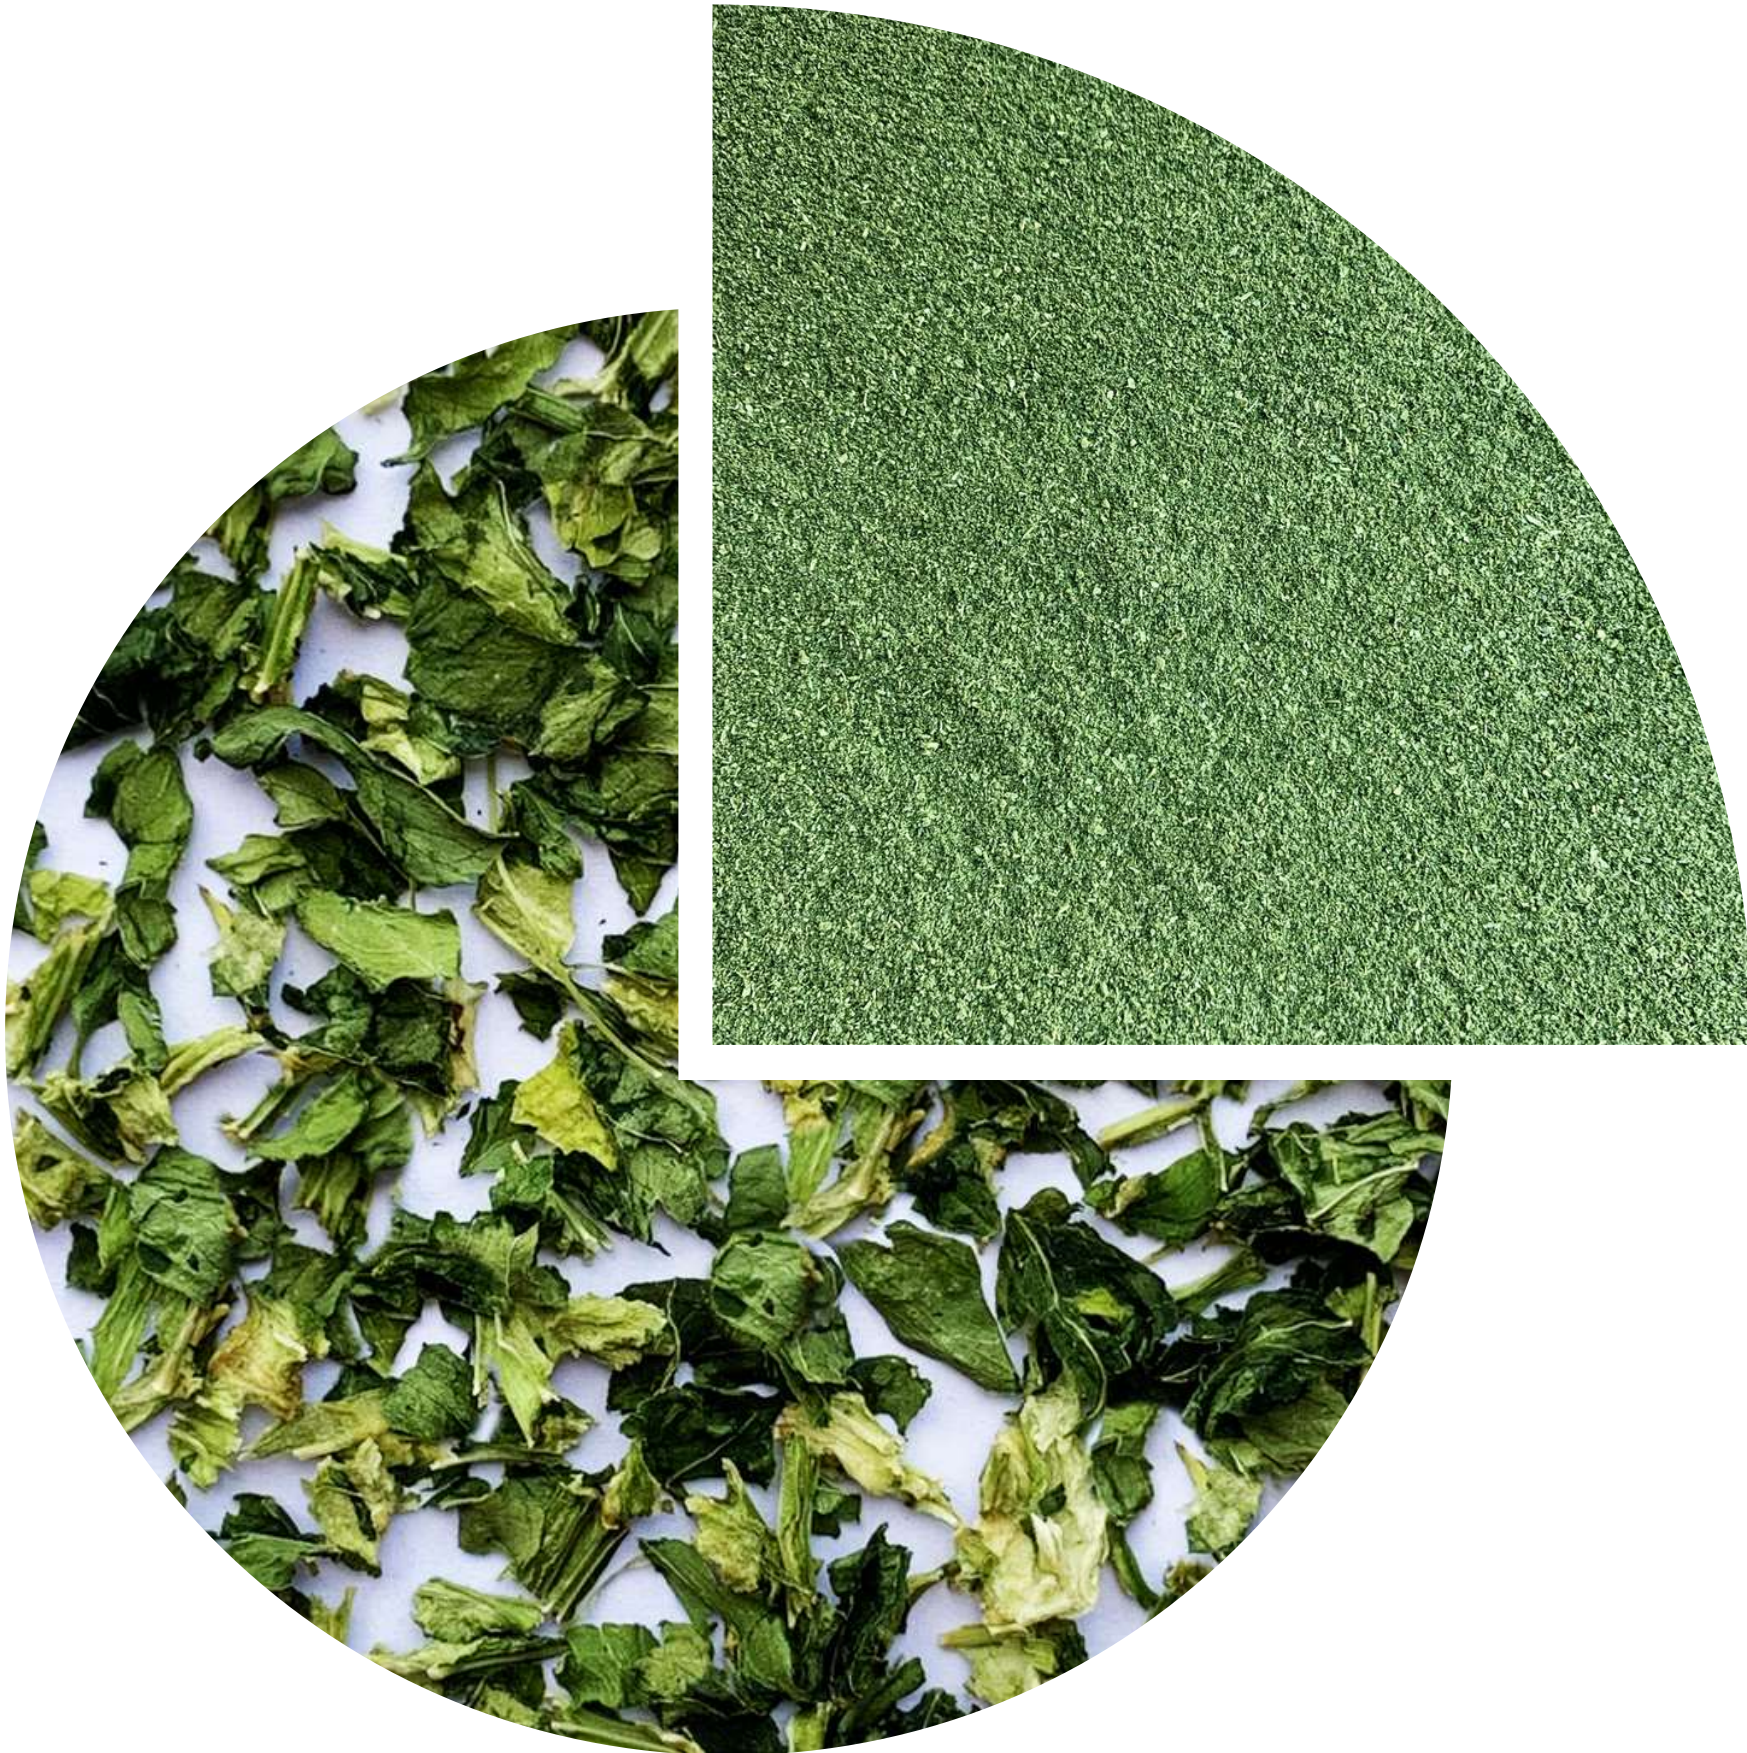

APPLICATIONS

Our **dehydrated vegetables**, available **in pieces** (3-5 mm) and **powder** (100-200 micron), can be used to make instant rice, instant soups, instant noodles, instant cous cous or other ready-to-cook products, to make pesto sauces, creams, bakery products such as bread, breadsticks, crackers, biscuits and cakes. They are also used as natural flavours or colouring in ice cream, beer and spirits, in the production of cheese, sausages and cured meat as well as to make herbal products and dietary supplements.

WATCH THE VIDEO 

ORGANIC DEHYDRATED ARUGULA

3-5 mm pieces
100-200 micron powder
